SMARTAINNOVATORS

Promoting AI-driven digital Transformation and innovation in VET Schools for social change and better Skills match with the labour market

About the project

Rapid digitalisation over the past decade has transformed many aspects of work and daily life. Driven by innovation and technological evolution, the digital transformation is reshaping society, the labour market and the future of work, and inevitably E & T. Employers face difficulties in recruiting highly skilled workers across a number of economic sectors, including in the digital sector. Boosting digital skills at all levels helps increase growth and innovation and build a fairer, more cohesive, sustainable and inclusive society. Being digitally skilled and acquiring digital literacy can empower people of all ages to be more resilient, improve participation in democratic life and stay safe and secure online.
